Hey CDG Website Application Firewall (WAF)

Protect and Speed Up Your Website

Features and Benefits

Protection

The CDG Firewall is a cloud-based WAF that stops website hacks and attacks. Our constant research improves our detection and mitigation of evolving threats, and you can add your own custom rules.

- Instantly Block Hackers
- DDoS Mitigation and Prevention
- Virtual Patching and Hardening
- Protect Brand Reputation
- Prevent Zero-Day Exploits

Performance

Our CDN(Content Delivery Network) makes your site faster and highly available across the world. Built on our global network of secure data centers, your visitors, customers, and search engines will notice a dramatic improvement.

We are serious about performance so we use several techniques to make your site faster. Website security is only useful if it doesn't degrade the user experience. Our CDN caches your website content automatically. Speed your website by over 70%!

- Smart Caching Options
- Fast HTTP/2 Support
- Resource Optimization via GZIP Compression
- Reduced Server Load
- Works with Other CDNs

We focus on useful metrics to optimize speed, like total time, not first byte or server response time. Our growing network outperforms competitors and offers all the servers you need to get optimal speed and performance.

Website Hack Protection

Protect your site from hacks and attacks. Our Web Application Firewall (WAF) and Intrusion Prevention System (IPS) provide the protection required against website threats. Let us preserve your website traffic and rankings while increasing your website performance with:

Malware and Hack Protection - We protect your website against malicious code and prevent website hacking with our Web Application Firewall (WAF).

DDoS Attack Mitigation - Distributed Denial of Service (DDoS) attacks can cause downtime. We block layer 3, 4, and 7 DDoS attacks

Zero-Day Exploit Prevention - Hackers discover new vulnerabilities every day. We protect sites and stop suspicious behavior. Mitigating new threats rarely requires a patch.

Brute Force Attacks Protection - Automated hacker tools target all sites. We stop brute force attacks and password cracking to prevent site abuse.

CDG Website Security Platform

The Ultimate Protection and for Your Website

What is the CDG Platform?

CDG offers a managed security service provider for websites. Our cloud-based platform gives you complete website security, including an antivirus and firewall for your website.

The platform is supported by our Security Operations Center (SOC), providing 24/7/365 monitoring and response to all attacks.

- Improve speed with caching and content delivery network (CDN)

- Mitigate Distributed Denial-of-Service (DDoS) attacks
- Prevent hacks and vulnerability exploit attempts
- Protect against the OWASP Top 10 (and more)
- Stop brute force attempts against your website login pages
- Leverage geographic load balancing and reliable uptime

**** The CDG platform offers ALL the benefits of the WAF(Website Application Firewall) listed above, along with Malware Detection, Malware Cleanup and Blacklist Removal.*

What does it do?

We monitor for security incidents, fix website hacks, and protect your site to keep hackers out. The platform also keeps your website running fast and ensures operational continuity.

Who is it for?

Any website owner or business that wants to stop worrying about website security and have it managed on their behalf by trusted and experienced professionals.

Website Malware Scanning & Detection

Scan your website for malware, hacks, and blacklist status. Receive continuous website monitoring with alerts and daily updates. You can rely on our state-of-the-art website malware scanner to gain visibility into your website security.

Website Malware Scanner - This scanner monitors for signs of website malware and indicators of compromise (IOC) with our website scanning tools.

Website Server-Side Scanner - We check all files on the server for signs of malware to find backdoors, phishing pages, spam, DDoS scripts, and more

Blacklist Status - A blacklisted site loses at least 95% of its traffic. This scanner monitors for security warnings from blacklist authorities.

DNS Monitoring - Our scanners detect changes to your website's domain name system (DNS) settings. We alert you if any changes are made.

SSL Certificate Monitoring - If any changes are made to your website's SSL certificate (HTTPS), receive immediate alerts so you can take action.

SEO Spam Scanner - Spam keywords and link injections harm your brand. Discover signs of SEO spam before Google and other search engines do.

Website Uptime Monitoring - Websites can go down. It is critical to know when visitors can't access your site so that you can take immediate action.

Website Malware Removal & Protection

Repair and restore hacked websites before it damages your reputation. We offer a 30-day money-back guarantee because we know we can help. You can rely on our dedicated incident response team, state-of-the-art technology, and excellent customer service.

Remove Website Malware - We safely remove any malicious code in your website file system and database. We restore your site completely.

Repair SEO Spam - SEO spam keywords and link injections harm your brand. Make sure your website looks right in search engines.

Remove Blacklist Status - Websites with security warnings lose 95% of their traffic. We submit blacklist removal requests on your behalf.

Prevent Future Attacks - Our website firewall (WAF) blocks attacks by filtering malicious traffic. We stop hacks and speed up your site.
